

Manage and protect your company's Internet experience with powerful, state-of-the-art Internet filtering software. Your organization can increase productivity, reduce liability and preserve precious bandwidth by implementing ContentProtect Professional Internet filtering.

ContentProtect Professional Internet filtering offers the most effective and flexible Internet filter available today! You can easily customize ContentProtect Professional's settings to fit the needs of each employee in your organization, for separate groups and departments, or apply these settings company-wide.

Powerful reporting tools enable administrators to review where employees are spending their time online. You can customize ContentProtect Professional's filter settings to block specific Web sites, domains and chat rooms, helping you manage risk within your organization.

ContentProtect Professional's Remote Management feature equips you with powerful administration capabilities. From any Web browser you can modify your entire organization's settings.

ContentProtect Professional offers powerful online reporting tools, accessible from any Internet connection. These reports offer a complete view of your company's Internet activity.

## Why do you need ContentProtect Professional?

A study conducted by International Data Corporation (IDC) concluded that 30 to 40 percent of Internet use in the workplace is not business related. (Source: IDC, Secure Content Management Report). ContentProtect Professional will help you increase productivity as well as protect your company's assets and employees from unwanted or harmful Internet content.

## How does ContentProtect Professional Filter?

ContentProtect uses dynamic analysis (in conjunction with word and URL lists) to filter Web content. As Web pages are requested, ContentProtect's dynamic analyzing engine has the ability to understand content in context and filter appropriately. Based on the user's filter settings, content is accessed or blocked.

# [Content] Watch

## Measurable, Quick Return on Investment -

In an environment where as much as 2 hours a day is lost to non-work related Web Surfing, ContentProtect will pay for itself within the first few days of use.

## Reporting -

ContentWatch provides the ability for Administrators to view reports anywhere and at any time. Reports are stored in the ContentWatch Data Center (CDC). Having data stored in the CDC permits access to online reports from any Internet connection in the world. Administrators can check on the Internet activity of their employees from work or in a hotel room while traveling.

## Remote Management -

Administrators can review reports, make changes to user's internet policies, and permit or terminate access to the Internet—from any Internet connection.

## Filtering of Encrypted and Secure Proxy Websites -

Using secure proxy Websites is the number one method used to circumvent desktop filters. ContentProtect aggressively blocks attempts to get around filtering by either blocking or filtering secure proxy and encrypted Websites.

## Customized White Lists -

ContentProtect permits you to create customized lists of unacceptable or acceptable Web sites. For example, you could set up a white list of sites that you would only allow your employees to visit.

## Instant Messaging -

ContentProtect provides better tools for managing access to popular Instant Messaging applications such as Windows Live Messenger, Yahoo, AIM, and any Jabber based IM.

## Perfect for Mobile Computer Users -

Because of its client-based architecture, ContentProtect is a perfect fit for mobile or notebook computer users. Regardless of how the user connects to the Internet, filtering is present. Without a client-based solution a user could simply bypass the corporate network by using an alternate connection.

## E-mail Notifications -

Administrators can receive an aggregated e-mail when certain users are trying to violate or override the defined Internet Usage Policy.

## Group Administration -

ContentProtect is highly customizable permitting Administrators to create organization, group, or individual filtering settings for employees, rather than forcing them into a "one size fits all" scenario like some products do. You can also assign specific administrators to specific groups saving the organization additional time and money.

## Value and Ease of Use -

ContentProtect does not require additional hardware expenses (servers, gateways, routers, proxy servers, etc.). Simply purchase the software and install on your computers and ContentProtect will begin filtering.
